

appropinquat proportioni graduum PG. Vergit tamen versus D. quidem ad proportionem sinuum DB. ad GE. at versus P. ad proportionem sagittarum BP. ad FP.

IV.

DE MENSURA TEMPORIS, SEV MORÆ PLANETÆ IN QVOLIBET ARCV orbitæ.

Qua ratione planum Elliptici segmenti fit aptum ad mensurandam planeta moram in illius segmenti arcu?

Non aliter, quàm si diuisione circuli in partes æquales, constituentur arcus ellipseos inæquales, & parui circa Apfidas, maiusculi circa longitudines medias, in hunc modum.

Centro B. interuallo BP. scribatur circulus PDRT. cuius diameter PBR. & in eo, ut in lineâ Apfidum, A. Sol,
